# HOW LIGHTSTREAM DELIVERS CLOUD DEFENSE

**Cloud Defense is a Lightstream mSOC™ cloud-delivered solution that makes it easy to outsource all your operational end-to-end cybersecurity management, including prevention, detection, response, and compliance. The Lightstream Security Operations Center (SOC) is your 24/7 SOC— strengthening your cybersecurity operations by adding automated prevention, continuous threat monitoring, and an orchestrated response, all from our expert analysts.**

We leverage a comprehensive Cloud Native Security Platform to protect and integrate with cloud-native architectures and toolkits to ensure complete security coverage:

- Cloud Security Posture Management (CSPM) monitors the security posture, detecting and responding to threats, and maintaining compliance.

- Cloud Workload Protection Platform (CWPP) secures hosts, containers, and serverless applications across the application lifecycle.

- Cloud Identity Security enforces permissions and secure identities across workloads and clouds.

- Cloud Network Security gains network visibility and anomaly detection, and cloud-native firewalling.

- Cloud Code Security integrates into the CI/CD pipeline for application and infrastructure as code security.

Lightstream maintains configurations, policies, and signatures to ensure accessibility, security, and regulatory compliance. We take care of one of cybersecurity's heaviest operational burdens, allowing your critical security staff to focus on core business issues.
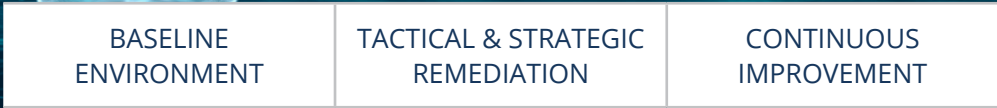

## Keeping Your Cloud Safe and Secure

At Lightstream, we built our business on the cloud and have had years to learn and adapt to best protect and manage your cloud. We have helped a wide range of customers—from mid-enterprise to Fortune 100 companies—manage security by tailoring our Cloud Defense to what they already built into their cloud. We can do the same for you.

Whether you're a small security team overwhelmed by the never-ending alerts or new to the cloud, our team of cloud and security experts and cloud-native platform can tailor a solution that keeps your cloud safe and secure. Let Lightstream help you manage the increased security needs that come with your growing cloud.

## Get Started Today

Let Lightstream Cloud Defense lower security risks by building a resilient public cloud. We continually monitor, detect, and respond to incidents that cause cyber security and compliance failure to protect your cloud. You can trust our world-class experts and industry-leading technology to deliver the security outcomes you need to keep your cloud safe and secure.
