

EDGE DEFENSE

How Lightstream Delivers Edge Defense

As the number of devices connected to the internet has grown exponentially, it has spread your data further, putting you at greater risk for attacks. Your firewalls are a crucial facet of your security strategy. If they're misconfigured, or you have an inexperienced team, they may not protect your business from dangerous outside traffic coming onto your network.

Lightstream's Edge Defense protects your firewall by providing management, maintenance, and operational support for your next-generational firewalls and web application firewalls (WAF). We have been delivering firewall security to our customers for years and have grown our expertise to keep your organization secure by operationalizing and optimizing your firewalls—at scale.

Our unparalleled managed firewall protection is supported by a 24/7 Security Operations Center (SOC) team that helps you implement, operationalize, and optimize your firewalls. We'll even help you customize the advanced features you need to ensure your organization's security.

Balance Risk and Business Outcomes

Our team of skilled cloud and security experts will help you balance risk with your balance outcomes by connecting your business assets, protecting what matters most, and continually innovating and optimizing to protect your network's edge. We offer three tiers to suit your business and security needs:

Basic	Complete	Full-scope
device and policy 24/7 monitoring with log storage, alert forwarding, threat detection, and basic response	configuration and security policy management, including deployment, feature set, and optimization	digital forensics and incident response (DFIR) management with tactical mitigation, recovery assistance, and disaster preparedness consulting

PROTECT WHAT
MATTERS

CONTINUALLY
INNOVATE + OPTIMIZE

Protection for Every Second of the Day

Our state-of-the-art SOC provides protection 24/7, every day of the year. Whether you're struggling to fill IT positions requiring extensive security expertise or need a team to manage security, Lightstream's team of experts can help.

We monitor and manage security to keep your operations safe. You can trust our years of experience and ISO 27001-certified security professionals to:

- Provide 24/7 hardware and data protection, including data center, network, endpoints, or in the cloud
- Demonstrate compliance through GDPR, PCI, DigiD, BIG, BIWA, NEN7510, ISO27000, and more
- Provide managed services for detection and response, next-generation firewalls, and Secure Access Service Edge (SASE)
- Use AI-enabled automation and best practices

Get Started Today

Let Lightstream Edge Defense strengthen and protect your network's edge—and your business—by managing and maintaining security and optimizing your firewalls. Lightstream's SOC team continually monitors your security to provide 24/7 hardware and data protection that ensures no outside traffic gets onto your network. Paired with our industry-leading technology, you can rest assured our team will keep your organization and data secure.

How Lightstream's Edge Defense Helps

- Management maintenance and operational support for next-generation firewalls and WAFs
- Full lifecycle services to implement, operationalize, and optimize firewalls at scale
- Security and compliance requirements support using a predictable OPEX model

Why Choose Lightstream

- 24/7 Security Operations Center (SOC) protection
- World-class technology expertise
- Multiple service tiers and customizable delivery models
