

Energy Company

With a full understanding of this company's overall business goals and the challenges associated with a Cloud migration for a 24/7 operation, The Lightstream team focused on decreasing downtime while continuously providing back up support at every stage of the migration to the Azure ecosystem.

Business Problems

- The company had a recent business acquisition. The newly acquired business was utilizing outdated technology and servers that needed to be updated to the Cloud.
- With two businesses merging into one, the company needed a functional system that could be accessed by all colleagues regardless of location or time.
- The company is a 24/7 operation so they also needed a solution that could minimize disruptions to their business revenue as well as their colleagues valuable work-time.
- Additionally, they needed assistance with navigating a complex funding process for the Cloud migration.

Solution

- Lightstream initiated a workshop that provided guidelines for the Cloud adoption along with the Dev Ops recommendations for the Azure environment.
- Lightstream executed their tried-and-true process alongside the custom roadmap created for the company by Lightstream Cloud Architect.
- Lightstream's continuous support of this company's timeline decreased downtime while providing back up support to minimize disruptions to both revenue and colleague operations.

Business Outcomes

- Lightstream was able to provide a seamless transition for the existing and newly acquired colleagues of this company to have equal access to all the resources while maintaining compliance.
- Lightstream expertly negotiated a difficult funding approval that was necessary for the company to complete the Cloud migration through the Azure platform.
- With Lightstream's proficiency, the company will have a future-forward supported Cloud environment that is fully managed through high quality service.
