

Semiconductor Supplier Company

With a full understanding of the company's overall business goals, Lightstream focused on finding a specific global security solution that set the organization up for future growth and reduced potential threats, while saving time and resources for an already lean team.

Business problems

- The company needed a global cloud implementation strategy and partner that could evolve with the organization as it continued to grow.
- The company has offices and warehouses all over the world and needed a partner that would work with its unique set of circumstances.
- The organization's team was lean and it recently lost a few developers. It needed a partner who could provide additional support after implementation.

Solution

- Lightstream identified best-in-breed Prisma Cloud from Palo Alto as the best solution.
- Lightstream provided full implementation and deployment of Prisma globally.

- Lightstream identified the company's need for support and provided 24/7 responsiveness and expertise beyond implementation.

Business outcomes

- Lightstream's expertise on utilizing Prisma Cloud set up the organization for future growth and evolution – helping it operate more efficiently as it accelerates change.
- Threat levels were significantly reduced during Lightstream's implementation and deployment of Prisma.
- Lightstream's expertise of Palo Alto's top security solutions means continued management and future solution evolution can be handled without needing Palo Alto to step in – saving time and resources for both Palo Alto and the client.
- Lightstream's approach created a significant reduction in alert noise and count, which saves time and resources when threats are identified.
- Lightstream identified key players on the client's team to integrate into the operationalization of the platform – allowing for additional on-site support.
- With 24/7 support from Lightstream, this meant less downtime for the organization and better solution optimization.
